Data Networks

Physical Network Technologies:

- Copper cabling
- Fibre cabling
- Wireless, microwave and laser links

Local & Wide Area Networks:

- TCP/IP network design & planning
- Managed internet connectivity
- MPLS wide area networks

Data Networks

Our approach to providing data networks incorporates the latest technologies to ensure that we offer our clients a secure, robust and scalable solution to their networking requirements.

Focus on MPLS

Our own MPLS network, built on BT's backbone, enables us to provide fully meshed private networks that have revolutionised multi-site working for many of our clients. It provides a fantastic delivery mechanism for Cloud based services, including hosted telephony and technical diversity from the Internet. Delivery over ADSL, Fibre to the Cabinet or dedicated Leased Lines offer a solution to a wide range of networking needs.

Single or multi-site networks across the UK and beyond

Whether we are installing a Local Area Network (LAN) across structured cabling, wireless devices or a Wide Area Network (WAN), our primary concern is that your network will be both stable and secure.

We are able to provide a variety of networking solutions such as:

- CAT5e cabling
- CAT6 cabling
- Fibre optic cabling
- Wi-Fi networks
- Microwave links
- Laser links
- Managed broadband services
- Satellite broadband
- Internet based Virtual Private Network (VPN)
- Pan European and Pan American MPLS Network
