IT Solutions

Computer Service Centre works with you to translate your business needs into tangible working solutions.

Focus on Account Management

Our Account Managers are not salespeople. All have many years experience in the IT sector and strive to help our clients avoid unplanned expenditure and the pitfalls of misguided IT projects. They can provide an invaluable bridge between your business and its IT needs, as well as a point of accountability for the delivery of all of your IT services.

IT Strategy driven by experts in business solutions

From providing straight-forward computer hardware, such as computers and printers, to installing complex IT infrastructure and networks across multiple sites, we are able to implement information technology systems to help your business grow.

We offer a full range of products, services, software and support, remaining independent, impartial and not tied into selling any one particular brand, although through our experience, we prefer to build our systems on a portfolio of tried and tested solutions.

Our team of Account Managers and qualified Engineers plan and implement bespoke designs in line with your unique IT requirements. Each of our clients is assigned a dedicated Account Manager who works in direct partnership with you to ensure your IT systems remain appropriate to your requirements and that your IT strategy supports the changing needs of your business. They will share insights gained from best practice across our client base and help create budgetary plans to move away from the costs and business interruptions of unplanned purchases.
